introduction

Zoozooswap is a community-owned NFT marketplace, with its "owners" holding the (Polygon) ZOZO token. Zoozooswap awards the ZOZO token to active users on the platform, who buy or sell on the NFT marketplace. It distributes ZOZO every month .

The platform places a particular focus on art assets. Creators can use Zoozoo to "mint" new NFTs to sell their creations, whether they be books, music albums, digital art, or movies. The creator can even show a sneak peek of their creation to everybody who comes to Zoozoo but limit the full project to the purchaser.

Zoozooswap buys and sells NFTs in categories like art, photography, games, metaverses, music, domains, memes, and more

Betting Results and Earnings One of our strategic visions in zoozooswap is to create monetary incentives for the most committed and motivated players.

Betting the results Based on our betting and reward projections, we will allocate quite a lot of tokens for betting reward. This will incentivize stakeholders to hold their tokens during the early stages. Staking will decrease as new features are released.

NFT Guarantee When a user purchases NFT from the system, a percentage of the purchase price may go to special collateral account associated with NFT. The user then has the option to resell it to system (i.e. destroying the NFT) for a price equivalent to the locked-in guarantee (or a percentage of he). This guarantees that the NFT value cannot be below a certain threshold. This feature also allows users to take out loans using NFT as collateral.

An ever-evolving world

NFT Maker Original NFT Creator is a unique tool enabled by Zoozooswap that allows the community to create and design their own in-game NFT assets based on certain constraints defined by the blueprint. Depends On the scarcity of blueprints, a number of materials can be used in the creation of objects. The rarer the blueprint, the more materials that can be used to create an object. To prevent abuse, game developers reserve the right to enforce rules that limit and review the steps for the creation of NFTs. This process will later be submitted to the Community DAO Council. We anticipate that the NFT maker will be rolled out gradually to users, either through competition, or by selling features for ZOZO tokens.

Model token

ZOZO tokens are the native currency on Zoozooswap. It allows token holders to play, invest, ZOZO payouts are the currency players use to purchase assets and land on NFT market. DeFi Staking is a way to lend currency, and receive interest in return. Token holders can participate in staking and get prizes in a certain percentage platform earnings will be awarded as betting rewards. For example, the upcoming game platform 2022 will have revenue from the sale of plots, assets sales, transaction costs, etc. and that a fixed proportion will be distributed to betting pool. NFT:s will also have DeFi features such as guarantees and buy-backs (as described in this document) Governance Owning ZOZO allows players to participate in the governance process through a decentralized organization, with a proposal and voting structure.

Our mission

create a creative marketplace for NFTs artists to sell their art digital art..finance swap yield and farming games decentralized 100% for the community

With the new boom in cryptocurrencies and decentralized finance, investors and digital currency holders see many opportunities to grow the value of their digital assets.

One of them is the idea of staking ZOZO cryptocurrency tokens or using a decentralized yield farming approach to gain interest in the digital currency.
